EDUCATION

Purdue University

Bachelor of Science in CyberSecurity

West Lafayette, IN

Jan. 2024 – Dec 2026

EXPERIENCE

Student Technical Coordinator

Purdue University

Aug 2024 – Present

West Lafayette, IN

- Supervised and trained Technical Representatives, providing performance feedback and ensuring compliance with IT Labs policies and scheduling.
- Monitored ticket queues, lab dashboards, and system alerts to quickly identify outages or account/security issues and coordinate response with Technical Representative
- Provided front-line technical support at Service Desks and Site Offices, assisting students, faculty, and staff with Windows and macOS issues, including password resets, MFA/Duo authentication, software and printing problems.
- Triage incidents, collected logs and screenshots, created support tickets in TDX, and collaborated with senior staff to ensure issues were escalated properly.

PROJECTS

Enterprise Network Administration

- Designed and deployed a multi-site enterprise network with HQ, Remote, Inner DMZ, and Outer DMZs, protected by a pfSense firewall with NAT, DNAT, and zone-based rules.
- Implemented hybrid DNS architecture using Windows Server DNS and Linux BIND with zone transfers, forwarders, and DNSSEC signing for public domains.
- Built a secure enterprise email system using Postfix + SpamAssassin as a public relay and Microsoft Exchange for internal mailboxes, including SPF, DKIM, and DMARC.
- Deployed a Linux-based CA and issued X.509 certificates for TLS-enabled web services and S/MIME email encryption
- Implemented load-balanced and proxied web services using Relianoid ADC, transparent HTTP proxying, and SSL/TLS offloading for public-facing applications.

Enterprise Network Design and Security

- Designed and deployed a multi-device enterprise network using Cisco ISR 4331, Cisco 1921, Cisco 3750 switches, Aruba switch, and VyOS, implementing VLAN segmentation (802.1Q), inter-VLAN routing, DHCP, and NAT/PAT to enable controlled access to external networks.
- Configured Spanning Tree Protocol across multiple switches to eliminate Layer 2 loops, designate root bridges per VLAN instance, and enforce physical port security through interface documentation and unused-port shutdowns.
- Implemented OSPF between enterprise routers using CIDR-based addressing, integrating routed VLANs, and validating end-to-end connectivity across wired and wireless segments.
- Applied Access Control Lists to restrict TFTP and network access by subnet, deployed VyOS as a wireless access point, and verified traffic behavior using Wireshark, SPAN port mirroring, and packet-level analysis.

CERTIFICATIONS

Google Cybersecurity Professional Certificate –Coursera

SOC Level 1 Learning Path (TryHackMe)

CompTIA Security+ (In Progress, Expected May 2026)

SKILLS

Security: System hardening, Vulnerability management, Identity and Access Management, Firewalls, Encryption and Authentication, Security documentation, Log analysis, Basic incident response

System and Networking: TCP/IP, OSI, Windows Server, Windows Client, Linux, VMware, Nutanix, Active Directory, DNS, DHCP, VLAN, STP, NAT, VPN, NFS, Samba, pfSense, VyOS, Cisco IOS, System Administration, Network Administration,

Tools: Bash, PowerShell, SQL, Wireshark, Tcpdump, Nmap, Azure, Suricata, Python, Splunk, Elastic Stack
